GC III Benchmark#1 Spring 2016 Study Guide

when created	Where the resolution of a raster image is determined
when outputed	Where the resolution of a vector image is determined
Fact:	300 dpi and 300 lpi are not the same
133 to 150	line screen is commonly used for magazines
150	300 dpi image = 2 inches wide, increased to 4 inches wide the resolution after resizing the image
the Freeform Pen tool in Magnetic mode	hold down the mouse button to lay down
.psd	identifies a native Photoshop file
"Bleeding"	ink on one side of paper showing through on the other side
embedded link to the placed file	Smart Object
Option/Alt	changes the Cancel button to a Reset button
result of dragging an image thumbnail from the Mini Bridge panel	image is added to the active file as a Smart Object layer
result of dragging regular layer from 1 document window to another	image is added to the active file as a regular layer
Edit>Transform>Flip Horizontal	affects only the active layer in a file
Quick Selection tool	used to select large, irregular areas of solid color
Marching "ants"	identifies the edges of a selected area
Frequency	Lasso tool in Magnetic mode: defines the number of points
Wrap text	Transform mode: option is NOT available in the Option
Feather	used to soften the edge of the selection
Fact:	Unmasked areas are copied to a separate layer when using layer mask
It is not possible to preserve deleted pixels in Photoshop CS6.	correct procedure to make sure the full image outside the cropped area is still available
